

Introduction:

The Food Express Delivery Platform is a Java Swing and MySQL database application designed to support customers, restaurants, delivery drivers, and administrators within a multi-vendor food delivery system. The GUI connects directly to a MySQL database using JDBC and supports core SQL operations such as SELECT, INSERT, UPDATE, DELETE, JOIN, COUNT, and SUM.

Customer Dashboard

Vendor ID	Restaurant Name	Category
1	Burger Bros	Burgers
2	Taco Teleport	Mexican
3	Pizza People	Pizza

Stakeholder:

Customer

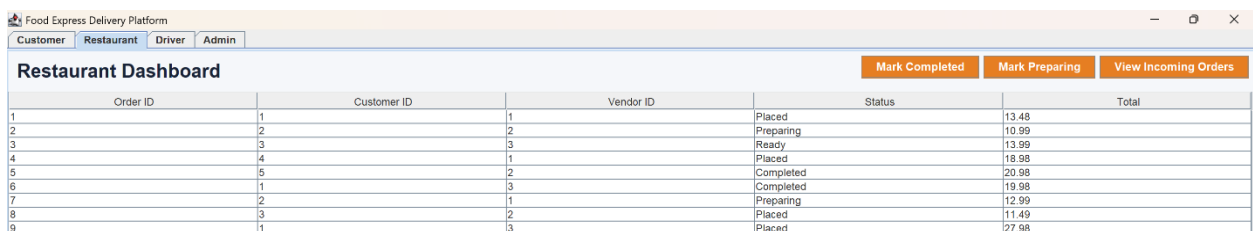

Actions:

- Select Customer
- Select Quantity
- Browse Restaurants
- View Selected Menu
- Place Order

Description:

Customers can select a customer profile, browse restaurants, view menu items, choose a quantity, and place orders. Orders, quantities, and delivery records are inserted directly into the database through the GUI.

Restaurant Dashboard

Order ID	Customer ID	Vendor ID	Status	Total
1	1	1	Placed	13.48
2	2	2	Preparing	10.99
3	3	3	Ready	13.99
4	4	1	Placed	18.98
5	5	2	Completed	20.98
6	1	3	Completed	19.98
7	2	1	Preparing	12.99
8	3	2	Placed	11.49
9	1	3	Placed	27.98

Stakeholder:

Restaurant / Vendor

Actions:

- View Incoming Orders
- Update order status

Description:

Restaurants can view incoming orders and update order statuses using “Mark Preparing” and “Mark Completed.” Status updates are written directly to the database.
